

PSOpenAPITools - the PowerShell module for the SalesTim API

The unified Microsoft Teams Governance API. Visit our Tech Hub for more information.

This PowerShell module is automatically generated by the OpenAPI Generator project:

- API version: 1.2.3
- SDK version: 0.1.2
- Build package: org.openapitools.codegen.languages.PowerShellClientCodegen For more information, please visit <https://developers.salestim.com/api>

Frameworks supported - PowerShell 6.2 or later

Dependencies

Installation

To install from the source, run the following command to build and install the PowerShell module locally:

Build.ps1

Import-Module -Name '.\src\PSOpenAPITools' -Verbose

To avoid function name collision, one can use -Prefix, e.g. Import-Module -Name '.\src\PSOpenAPITools' -Prefix prefix

To uninstall the module, simply run:

Remove-Module -FullyQualifiedName @{ModuleName = "PSOpenAPITools"; ModuleVersion = "0.1.2"}

Tests

To install and run Pester, please execute the following commands in the terminal:

Install-module -name Pester -force

Invoke-Pester

For troubleshooting, please run \$DebugPreference = 'Continue' to turn on debugging and disable it with \$DebugPreference = 'SilentlyContinue' when done with the troubleshooting.

Documentation for API Endpoints

All URIs are relative to <https://api.salestim.io/api/v1.0>

Class	Method	HTTP request	Description
ApprovalsApi	Approve-TeamCreation	POST /approvals/{approvalRequestId}/approve	Approve a team creation request
ApprovalsApi	Deny-TeamCreation	POST /approvals/{approvalRequestId}/reject	Reject a team creation request
AuditTrailsApi	Get-AuditTrailRecords	GET /audittrails/{code}/records	Get all the records from an audit trail
AuditTrailsApi	Get-AuditTrails	GET /audittrails	Get audit trails
JobsApi	Get-Job	GET /jobs/{jobId}	Get information about a job
SensitivityLabelsApi	Get-MyLabels	GET /me/labels	Get my sensitivity labels
TeamsApi	Add-TeamMember	POST /teams/{teamId}/members	Add a team member
TeamsApi	Invoke-ArchiveTeam	POST /teams/{teamId}/archive	Archive a team
TeamsApi	New-TeamChannel	POST /teams/{teamId}/channels	Create a new team channel

Class	Method	HTTP request	Description
<i>TeamsApi</i>	New-TeamChannelTab	POST /teams/{teamId}/channels/{channelId}/tabs	Create a new team channel tab
<i>TeamsApi</i>	New-TeamProvisioningJob	POST /teams/provisioning	Create a new team based on a template
<i>TeamsApi</i>	Invoke-DeleteTeam	DELETE /teams/{teamId}	Delete a team
<i>TeamsApi</i>	Get-Team	GET /teams/{teamId}	Get a team
<i>TeamsApi</i>	Get-TeamChannelTabs	GET /teams/{teamId}/channels/{channelId}/tabs	Get team channel tabs
<i>TeamsApi</i>	Get-TeamChannels	GET /teams/{teamId}/channels	Get team channels
<i>TeamsApi</i>	Get-TeamPrimaryChannel	GET /teams/{teamId}/channels/primary	Get the primary channel of a team
<i>TeamsApi</i>	Invoke-UnarchiveTeam	POST /teams/{teamId}/unarchive	Unarchive a team
<i>TeamsApi</i>	Update-Team	PATCH /teams/{teamId}	Update a team
