

Authentication

ABSTRACT

To access the SalesTim API, a valid Azure Active Directory access token is required. This article explains how to get it, as a user or as an application.

TABLE OF CONTENTS

[[toc]]

Supported access tokens

The SalesTim API expects a valid access token in the HTTP **Authorization** request header with a **bearer** token such as:

```
{  
  "Authorization": "bearer <JWT_TOKEN>"  
}
```

SalesTim supports access tokens retrieved from the following OAuth 2.0 grant flows: - Auth Code - On-behalf-of
- Client Credentials

Access on behalf of a user (authorization code flow)

Reference: Get access to the Microsoft Graph on behalf of a user

Access without a user (client credentials flow)

Reference: Get access to the Microsoft Graph without a user
